

The Perfect Tool for Pain Management

Theramine®

For the dietary management of pain

Theramine is a non-addictive, safe and clinically validated therapeutic option for the management of pain syndromes. **Theramine** is effective at managing ascending, descending and inflammatory pathways associated with pain syndromes. **Theramine** is not an NSAID or an opiate. There have been no reported GI bleeds or cardiac events associated with **Theramine**. **Theramine** is a medical food designed to address the specific nutrient and amino acid deficiencies related to pain syndromes.

What Does **Theramine** Do?

- ▶ Improves Pain Perception* (muscle, joint, nerve)
- ▶ Reduces Inflammation*
- ▶ Manages Altered Metabolic Processes Associated with Osteoarthritis
- ▶ Manages Altered Metabolic Processes Associated with Fibromyalgia
- ▶ **Theramine** restores homeostasis by promoting the production of the key neurotransmitters involved in the pain process such as serotonin, GABA, and acetylcholine. These important neurotransmitters are responsible for decreasing pain and inflammation.

How Effective is **Theramine**?

Theramine has been the subject of two large double blind, multicenter clinical trials. **Theramine** is more effective at reducing pain and inflammation than naproxen and ibuprofen, and is also very effective as an adjunct to a low dose NSAID.

Pain Reduction Theramine vs Naproxen*
